Education

ENS Paris-Saclay

Paris, France

Master MVA (Mathematics, Vision, Apprentissage), GPA: 14.79/20.0 (Honor Student)

2024–2025

Selected coursework: Convex Optimization, Object Recognition and Computer Vision, Reinforcement Learning, Geometric Data Analysis, Probabilistic Graphical Models, Representation Learning, Bayesian ML, DL in Practice, Generative Modelling, Graphs in ML.

TOBB University of Economics and Technology

Ankara, Türkiye

Bachelors of Science in Computer Engineering, GPA: 3.21/4.0 (Honor Student)

2019–2024

Merit-based scholarship covering five years of tuition and living expenses, awarded by the Istanbul Chamber of Industry for ranking in the top 0.003 in the National University Examination.

Work Experience

DxO Labs

Paris, France

Computer Vision Research Intern

Apr 2025–Oct 2025

Benchmarked face detectors and facial-feature segmentation for portrait editing; produced precise masks and compared SOTA baselines. Built geometry-based face warping (Laplacian deformation) and face recognition modules, later used in production.

TOBB University of Economics and Technology

Ankara, Türkiye

Computer Vision Research Intern

Jul 2024–Sep 2024

Built a video-to-label ML pipeline to classify stereotypic locomotor behaviors in fruit flies (*Drosophila*) within a TÜBİTAK-funded cognitive research project.

TEMSA

Istanbul, Türkiye

Data Science Intern

Jul 2024–Sep 2024

Designed an anomaly-detection system for the MD-9 electric bus: cleaned and merged vehicle CAN telemetry, analyzed signal patterns, and trained time-series models to predict normal behavior and flag anomalies for maintenance.

STM

Ankara, Türkiye

Software Engineering Intern

Oct 2023–Jan 2024

Worked as a full-stack developer, contributing to in-house web applications using Angular and C#.

Telecom Paris

Paris, France

Research Intern

Feb 2023–May 2023

Contributed to ACMoM's Eclipse-based model-transformation benchmark, automating runs, and reporting performance metrics.

HAVELSAN

Ankara, Türkiye

Software Engineering Intern

Jan 2022–Apr 2022

Contributed to DOOB-Tactical; implemented JAX for differentiable computing tasks.

Projects

Plug-and-Play Split Gibbs Sampler for Image Restoration (MVA): Explored Bayesian image restoration using Plug-and-Play inference with DDPM priors, enabling posterior sampling and uncertainty quantification. Compared its performance against DPS and DnCNN-based baselines, achieving sharper and more reliable reconstructions.

Text-to-3D Human Motion Generation (MVA): Reproduced the Motion Diffusion Model (MDM) with SMPL outputs and extended it with TMR++ text augmentation and cross-dataset generalization on HumanML3D and KIT-ML.

VibeTune (TOBB ETU): Built a prompt-based music recommendation pipeline combining Mistral-7B fine-tuning with ChatGPT sentiment embeddings for mood-conditioned retrieval. Implemented a React interface to support interactive user feedback loops and real-time recommendation updates.

Skills & Other

Technical: Python, Java, C++, MATLAB, NumPy, Pandas, OpenCV, Keras, PyTorch, Scikit-learn, Git, JAX, SQL.

Teaching: Assisted Linear Algebra course at TOBB ETU; tutored physics, maths to high school students.

Languages: Turkish (C2), English (C1), French (B1), German (B1).

Interests: Swimming (12 years), figure skating, tennis, oil painting.
